Agriculture

'84 may be good for La. economy and agriculture

By MERLYD A. ADAMS

Agriculture has played a major role in the Louisiana economy, and decades-long lower prices and difficulties in securing credit have not diminished its importance. The state's agricultural economy is expected to grow as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.

The state's agriculture sector is expected to grow, as the state's dairy farmers adjust to the removal of the dairy price support program, the state's overall dairy production is expected to drop and the state's soil conservation programs are expected to contribute to the state's overall economy.
