Bong's Disease Is Caused by Germ

Bong's disease formerly called foot rot, is a very prevalent problem among dairy cattle. This disease is caused by a fungus that has been found in almost every state with a large dairy industry. The disease is more prevalent in the spring and fall months when the weather is warm and humid. Prevention is the best method of control, but once the disease is present, it can be difficult to eradicate.

Sugar Cane

Sugar cane is a valuable crop in Louisiana. It is grown in the south and east coastal regions of the state. Louisiana produces more sugar cane than any other state in the United States. The crop is harvested in the fall, and the juice is extracted and processed to produce sugar. Sugar cane is an important source of income for many farmers in the state.

4-H Clubs

Louisiana 4-H Clubs are an important part of the state's agricultural community. They provide opportunities for youth to develop skills and knowledge in areas such as agriculture, science, and technology. The 4-H Clubs are run by local volunteers and are supported by state and federal funding.

Achievement Day

Achievement Day is an annual event in Louisiana that celebrates the achievements of 4-H members. It is held in the fall and features exhibits, competitions, and awards for members who have excelled in various areas. The event is a highlight of the 4-H year and attracts thousands of participants and spectators.
