Computer Center Adds Capabilities

The administrative activities of the USL Computing Center services the Business Office, the Library, the Registrar's Office, and other major administrative units.

State Agencies
In addition, some of the state agencies have called upon the USL Computing Center to conduct studies and research and upon Computing Center personnel to act as consultants in implementing automated procedures.

The University of Southwestern Louisiana presently has a Computer Science curriculum leading to a Bachelor of Science degree in Computer Science with scientific and commercial options, and a curriculum leading to a Master of Science degree in Computer Science.

Only Graduate Curriculum
At present the University of Southwestern Louisiana is the only college or university in Louisiana (either private or state supported) offering a graduate curriculum in Computer Science. It was the first one authorized to offer an undergrad—graduate curriculum. To date 46 students have been awarded the Master of Science in Computer Science from USL. During the 1970 spring semester a total of 64 students were pursuing the master's degree and 10 were pursuing the Ph.D.
