Conference cites genetic history of the Acadians

New Orleans - The last day of the Louisiana State University's conference on the history of the Acadians was marked by a keynote address on the genetic history of the Acadians.

Dr. John Doe, a professor of genetics at Louisiana State University, spoke on the genetic markers that can be used to trace the genetic history of the Acadians. He discussed how these markers can help us understand the migration patterns of the Acadians from France to Louisiana.

Dr. Doe's presentation was well-received by the attendees, who were interested in learning more about the genetic history of the Acadians.

The conference ended with a closing ceremony, which included a speech by the conference's organizer, Dr. Jane Smith. She thanked the attendees for their participation and expressed her hope that the conference would help increase awareness of the Acadian heritage.

The conference was held at the LSU campus in Baton Rouge, Louisiana.
