JAIL ADDITION PROPOSED

New Plan Stresses Rehabilitation

By MARTHA AVCOCK

There have been plans for a new jail in Lafayette for many years, but none of these plans has ever come to anything. Now, however, a new and better plan for a jail is being made.

The new jail would be built on the outskirts of the city, away from the crowded downtown area. It would have a capacity of 100 inmates and would be able to handle both male and female prisoners. The jail would be designed to provide a comfortable and safe environment for the prisoners.

The jail would be divided into several sections, each with its own cell block and staff. Each cell block would have its own recreation area, gymnasium, and kitchen. The jail would also have a medical facility and a visiting area for family and friends.

The new jail is designed to provide rehabilitation services to the inmates. There would be programs for education, vocational training, and drug treatment. The jail would also have a work-release program to help inmates prepare for reentry into society.

The new jail is expected to cost $10 million and is scheduled to be completed within two years. The city council is expected to vote on the new plan next month.

LAUNDRY - Large industrial washers and dryers are used at the jail, operated entirely by inmates. Handicapped staff washes and dries all the clothes for the inmates.

TRUSTEE DOOMSIZED - The men are allowed to sleep in a large dormitory, allowing for socialization and the rehabilitation process. The jail is designed to be a place of regrowth and self-improvement.

MAXIMUM SECURITY - Prisoners in solitary confinement are allowed to sit in their cells alone for the entire day and night. This is to help them focus on their rehabilitation and to prevent them from getting caught up in negative behavior.

MAN'S CELL - Prisoners are allowed to have a small bed in their cells, with a blanket and a pillow. They are also allowed to have a small television and a radio.

WOMEN'S CELL - Prisoners are allowed to have a large window in their cells, allowing them to see the outside world. They are also allowed to have a small bed and a blanket.
