Barbara Gutierrez

Montelaro talked about how Bishop Flynn came to him one day with a role from St. Elizabeth Ann Seton, blessed him and prayed with him. It is a first-class relic, a piece of bone taken from the saint's body, which Father Tom will keep with him throughout his ordeal. He says he has made novenas to her and has asked for her prayers. Father Tom also has another relic, a piece of the newborn girl's body, known as Day Zero, 40 days after the birth of Jesus, which he has kept since his days in the hospital. "I will keep this relic, too, close to my heart," he said. "I know she's not canonized, but I believe she is as holy as my mother. I thought of her often while I was in the hospital."

But when doctors told her that her chances of survival were nil, she believed the doctors were right. "I know this is the end, but I hope to end it in a good way," she said. "I want to be able to give new life to my brother. It's a good feeling."

"I accept this as God's will, as his asking this of me," he said softly. "I feel blessed. I feel I'm going to make it."

Frances needs to be at the Hospice of Southeast Louisiana in Mandeville from September 3 to October 10, 1989. She will be under the care of doctors from Day Zero to Day 100. She will be "a very painful procedure," explained Father Tom. "I don't know, because a small amount of marrow was taken from me while I was in the hospital. I feel extremely sure for about a week afterward."

A pint of blood was drawn from Frances after she entered the hospital. This was transformed back into her body. The process for harvesting the patient's bone marrow will be "very painful procedure," explained Father Tom. "I know, because a small amount of marrow was taken from me while I was in the hospital."
